

PAPIK Group opens the doors of K-Jardí, an integral high-efficiency retrofit in Valldoreix

PAPIK Group holds a new open house at K-Jardí, a full retrofit with an extension of more than 300 m² in Valldoreix, developed to high energy-efficiency standards.

PAPIK Group held a new open house at K-Jardí, a residential project in Valldoreix that reflects our way of understanding construction: combining architecture, technology and sustainability to create homes of maximum comfort and energy efficiency.

During the visit, attendees were able to walk through an almost-finished home and see first-hand the construction solutions that make it possible to reach high standards of wellbeing, air quality and minimal energy consumption.

The project combines the **full retrofit of an existing home** with an extension of more than **300 m²**, developed to high-performance energy criteria. An example of how innovation and design can turn a home into a place ready for the future.

The event was led by the PAPIK Group team, who shared the vision and the technical criteria behind the project, answering attendees' questions and showing the value of construction designed to last, save energy and improve the quality of life of the people who live in it.

At PAPIK Group we believe the best way to understand a project is to experience it. That is why we will keep promoting this kind of initiative, to bring our way of building closer to clients and professionals: efficient, healthy homes designed for people.
